- **Back-end**: Php , Python , C#, Django
- **Other**: Relational Databases, Entity, Identity

## Projects

### Job Portal

- The job portal app features two modules: one for job seekers and the other for companies. Users can browse and apply for job listings from companies. Implementation uses HTML, CSS, JS for the interface, and PHP and MySQL to store and manage job seeker and company data. **Repository**

### Advanced Tech Store Platform

- The e-commerce venture, built with HTML, CSS, JavaScript, Vue.js, Bootstrap, PHP, and MySQL, offers seamless user experiences and visually appealing designs. Vue.js enhances interactivity, while Bootstrap ensures mobile compatibility. PHP orchestrates server-side logic, and MySQL efficiently manages product and user data. Together, this tech stack powers our platform, catering to global tech enthusiasts with a diverse range of gadgets.   [Repository](#)
